Protect your pigs

Remember these steps.
Make the call if you see unusual signs of disease or death in your pigs

1 Stock purchase - Have procedures in place to ensure incoming pigs do not introduce disease.

2 Good pig health practices - Monitor the health of your stock. Keep a record of treatments and losses.

3 Work with your vet - Develop a health plan. Seek veterinary assistance for any sick pigs.

4 Visitors - Display biosecurity signage. Keep a visitor record. Provide visitors with clean boots and outerwear. Wash and dry hands. Disinfect tools and equipment.

5 Feed - Beware of contaminated feed. Use approved feed and ingredients only. **People food is NOT pig food.**

6 Pig transport - Wash pig transport between loads. Manage pig movements to avoid contamination. Complete a PigPass NVD.

7 Feral animals, pests and waste - Prevent access of domestic pigs to feral pigs and waste sites. Control pests.

8 Other livestock - House pigs separately to other livestock. Do not allow cattle and sheep to access pig feed.
